SONET/SDH

Exar expands into SONET/SDH

With a history of innovation in the T/E carrier arena, Exar continues its broadband communication strategy by offering a series of data aggregation devices that extend the Company's capabilities further into high-speed Metropolitan Area Networks (MANs).

Exar recently introduced its first in a family of data aggregation devices which is capable of aggregating 12 DS3/E3/STS-1 into OC-12/STM-4.

In conjunction with other Exar physical layer products, this device can greatly reduce design costs and board space requirements giving our OEM customers distinct market advantages. Additional SONET/SDH aggregation products are planned for release over the next few quarters. Exar also offers an OC-48 framer.
