8-bit Proprietary Microcontroller

CMOS

F²MC-8L MB89810A Series

MB89816A/P817A

■ DESCRIPTION

The MB89810A series is a line of single-chip microcontrollers based on the F²MC*-8L CPU core which can operate at low voltage but at high speed. The microcontrollers contain peripheral function such as timer, serial interface, a UART, and an external interrupt. The MB89810A series is applicable to a wide range of applications from welfare products to industrial equipment, including portable devices.

*: F²MC stands for FUJITSU Flexible Microcontroller.

■ FEATURES

High speed processing at low voltage
Minimum execution time: 0.8 μs/3.0 V, 1.33 μs/2.2 V

• F²MC-8L family CPU core
　　　　　Instruction set optimized for controllers : Multiplication and division instructions
　　　　　　　　　　　　　　　　　　　　16-bit arithmetic operations
　　　　　　　　　　　　　　　　　　　　Test and branch instructions
　　　　　　　　　　　　　　　　　　　　Bit manipulation instructions, etc.

• Four types of timers
8-bit PWM timer: 2 channels (also serve as reload timers)
16-bit timer/counter
21-bit time-base timer

(Continued)

■ PACKAGE

64-pin Plastic QFP
(FPT-64P-M06)

(Continued)
- Two serial interface
  8-bit synchronous serial (Switchable transfer direction allows communication with various equipment.)
  UART (5-, 7-, or 8-bit transfer capable)
- External interrupt: 8 channels
  Eight channels are independent and capable of wake-up from low-power consumption modes (with an edge detection function).
- Low-power consumption modes
  Stop mode (Oscillation stops to minimize the current consumption)
  Sleep mode (The CPU stops to reduce the current consumption to approx. 1/3 of normal)

■ PRODUCT LINEUP

Part number / Parameter	MB89816A	MB89P817A
Classification	Mass-production product (mask ROM products)	One-time PROM product (for evaluation and development)
ROM size	24 K × 8 bits (internal mask ROM)	32 K × 8 bits (internal PROM, programming with general-purpose EPROM programmer)
RAM size	2048 × 8 bits	
CPU functions	Number of instructions: 136 Instruction bit length: 8 bits Instruction length: 1 to 3 bytes Data bit length: 1, 8, 16 bits Minimum execution time: 0.8 μs/5 MHz Interrupt processing time: 7.2 μs/5 MHz	
Ports	Input ports: 8 (All also serve as peripherals.) Output ports: 8 I/O ports (N-ch open-drain): 5 (for LED driving) I/O ports (CMOS): 32 (14 ports also serve as peripherals.) Total: 53	
8-bit PWM timer	Two internal channels 8-bit reload timer operation (toggled output capable, operating clock cycle: 3 different cycles) 8-bit resolution PWM operation (conversion cycle: 3 different cycles)	
8-bit timer/counter	16-bit timer operation 16-bit event counter operation	
UART	5-, 7-, or 8-bit transfer capable Built-in baud rate generator Clock synchronous/asynchronous data transfer capable	
8-bit Serial I/O	8-bits LSB-first/MSB first selectability One clock selectable from four transfer clocks (one external shift clock, three internal shift clocks)	
External interrupt	8 independent channels (edge selection, interrupt vector, source flag) 4 channels: Level detection (level selectable) 4 channels: Edge detection (edge selectable) Used also for wake-up from the stop/sleep mode. (Edge detection is also permitted in stop mode.)	

(Continued)

(Continued)

Part number / Parameter	MB89816A	MB89P817A
Watch interrupt	Interrupt cycles: 4 different cycles (subclock)	
Watchdog timer reset	Reset occurrence cycle: 839 ms/5 MHz	
Standby mode	Sleep mode, stop mode	
Process	CMOS	
Package	FPT-64P-M06	
Operating voltage	2.2 V to 6.0 V*	2.7 V to 6.0 V*

*: Varies with conditions such as the operating frequency. (See section "■ Electrical Characteristics.")

■ DIFFERENCES AMONG PRODUCTS

1. Memory Size

Before evaluating using the OTPROM (one-time PROM) products, verify its differences from the product that will actually be used.

2. Current Consumption

When operated at low speed, the product with an OTPROM will consume more current than the product with a mask ROM.
However, the same is current consumption in sleep/stop modes (For more information, see "■ ELECTRICAL CHARACTERISTICS") .
3. Mask Options

Functions that can be selected as options and how to designate these options vary with product.
Before using options, check "■ MASK OPTIONS".
Take particular care on the following point:
For MB89816A, pull-up resistor option can be set for P50 to P54.

■ **PIN ASSIGNMENT**

(Top view)

(FPT-64P-M06)

■ PIN DESCRIPTION

Pin no.	Pin name	Circuit type	Function
23	X0	A	Main clock oscillator pins
24	X1		
18	X0A	I	Subclock crystal oscillator pins
19	X1A		
21	MOD0	B	Operating mode selection pins Connect directly these pins directly to V_{SS}.
22	MOD1		
20	$\overline{RST}$	C	Reset I/O pin This pin is an N-ch open-drain output type with a pull-up resistor and a hysteresis input type. "L" is output from this pin by an internal reset source. The internal circuit is initialized by the input of "L".
49 to 42	P00 to P07	D	General-purpose I/O ports A pull-up resistor option is provided. These ports have the port output inverting function.
41 to 34	P10 to P17	D	General-purpose I/O ports A pull-up resistor option is provided. These ports have the port output inverting function.
33 to 30	P20 to P23	F	General-purpose output ports These ports have the port output inverting function.
29 to 26	P24 to P27	F	General-purpose output ports
1	P30 /PWE	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as a pulse width detection enable input (PWE). PWE input is hysteresis input.
2	P31/$\overline{SCK}$	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as the clock I/O for the 8-bit serial I/O (SCK). SCK input is hysteresis input.
3	P32/SO	D	General-purpose I/O port A pull-up resistor option is provided. Also serves as the data output for the 8-bit serial I/O (SO).
4	P33/SI	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as the data input for the 8-bit serial I/O (SI). SI input is hysteresis input.
5	P34/PWO	D	General-purpose I/O port A pull-up resistor option is provided. Also serves as a pulse width detection output (PWO).
6	P35/PWI	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as a pulse width detection input (PWI). PWI input is hysteresis input.
7	P36/PTO1	D	General-purpose I/O port A pull-up resistor option is provided. Also serves as the toggle output for the 8-bit PWM timer 1 (PTO1).

(Continued)

(Continued)

Pin no.	Pin name	Circuit type	Function
8	P37/PTO2	D	General-purpose I/O port A pull-up resistor option is provided. Also serves as the toggle output for the 8-bit PWM timer 2 (PTO2).
56	P40	D	General-purpose I/O port A pull-up resistor option is provided.
58	P41/EC	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as a 16-bit timer/counter input (EC). EC input is hysteresis input.
59	P42/TXD1	D	General-purpose I/O port A pull-up resistor option is provided. Also serves as the data output 1 for the UART (TXD1).
60	P43/RXD1	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as the data input 1 for the UART (RXD1). RXD1 input is hysteresis input.
61	P44/SCL1	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as the clock I/O 1 for the UART (SCL1). SCL1 input is hysteresis input.
62	P45/TXD2	D	General-purpose I/O port A pull-up resistor option is provided. Also serves as the data output 2 for the UART (TXD2).
63	P46/RXD2	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as the data input 2 for the UART (RXD2). RXD2 input is hysteresis input.
64	P47/SCL2	E	General-purpose I/O port A pull-up resistor option is provided. Also serves as the clock I/O 2 for the UART (SCL2). SCL2 input is hysteresis input.
51 to 55	P50 to P54	G	N-channel open-drain I/O ports A pull-up resistor option is provided only for the MB89816A.
9 to 11	P60/INT0 to P62/INT2	H	General-purpose I/O ports A pull-up resistor option is provided. Also serve as an external interrupt input (INT0 to INT2). These ports are a hysteresis input type.
13 to 17	P63/INT3 to P67/INT7	H	General-purpose I/O ports A pull-up resistor option is provided. Also serve as an external interrupt input (INT3 to INT7). These ports are a hysteresis input type.
12, 57	V_{CC}	–	Power supply pin
25, 50	V_{SS}	–	Power supply (GND) pin
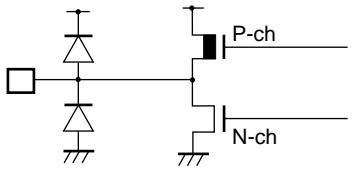

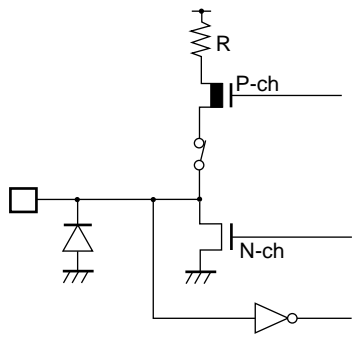

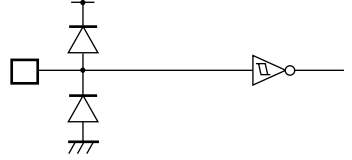

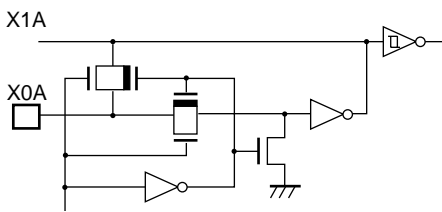

■ I/O CIRCUIT TYPE

Type	Circuit	Remarks
A	X1 X0 Standby control signal	• Main clock • At an oscillation feedback resistor of approximately 1 MΩ (1 to 5 MHz) • CR oscillator circuit selectability
B		
C	R P-ch N-ch	• At an output pull-up resistor (P-ch) of approximately 50 kΩ/5.0 V • Hysteresis input
D	R P-ch P-ch N-ch	• CMOS output • CMOS input • Pull-up resistor optional
E	R P-ch P-ch N-ch	• CMOS output • CMOS input • Hysteresis input (resource input) • Pull-up resistor optional

(Continued)

(Continued)

Type	Circuit	Remarks
F		• CMOS output
G		• N-ch open-drain output • CMOS input • Pull-up resistor optional (only for the MB89816A)
H		• Hysteresis input • Pull-up resistor optional
I		• Subclock (30 to 40 kHz) • At an oscillation feedback resistor of approximately 10 MΩ

■ HANDLING DEVICES

1. Preventing Latchup

Latchup may occur on CMOS ICs if voltage higher than V_{CC} or lower than V_{SS} is applied to input and output pins other than medium- to high-voltage pins or if higher than the voltage which shows on "1. Absolute Maximum Ratings" in section "■ Electrical Characteristics" is applied between V_{CC} and V_{SS}.

When latchup occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

3. Power Supply Voltage Fluctuations

Although V_{CC} power supply voltage is assured to operate within the rated range, a rapid fluctuation of the voltage could cause malfunctions, even if it occurs within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that V_{CC} ripple fluctuations (P-P value) will be less than 10% of the standard V_{CC} value at the commercial frequency (50 to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

4. Precautions when Using an External Clock

Even when an external clock is used, oscillation stabilization time is required for power-on reset (optional) and wake-up from stop mode.
■ PROGRAMMING TO THE EPROM ON THE MB89P817A

In EPROM mode, the MB89P817A functions equivalent to the MBM27C256A. This allows the OTPROM to be programmed with a general-purpose EPROM programmer (the electronic signature mode cannot be used) by using the dedicated socket adapter.

• **Writing Procedure**

(1) Set the EPROM programmer to the MBM27C256A.

(2) Load program data into the EPROM programmer at 0007_H to $7FFF_H$ (note that addresses 8007_H to $FFFF_H$ while operating as operating mode assign to 0007_H to $7FFF_H$ in EPROM mode).
Load option data into addresses 0000_H to 0006_H of the EPROM programmer. (For information about each corresponding option, see "• OTPROM Option Bit Map.")

(3) Program with the EPROM programmer.

• **Memory Space**

Memory space is diagrammed below.

Normal operating mode

EPROM mode
(Corresponding address on the
EPROM programmer)

0000_H	I/O
0080_H	
0100_H	Register RAM
0200_H	
0880_H	
External area
8000_H → 0000_H
Option area → Option area
8007_H → 0007_H
ROM Program area (PROM)
$FFFF_H$ → $7FFF_H$

• **Recommended Screening Conditions**

High-temperature aging is recommended as the pre-assembly screening procedure for a product with a blanked OTPROM (one-time PROM) microcomputer program.

```
┌─────────────────────┐
│   Program, verify   │
└─────────────────────┘
           ↓
┌─────────────────────┐
│       Aging         │
│   +150 °C, 48 h     │
└─────────────────────┘
           ↓
┌─────────────────────┐
│  Data verification  │
└─────────────────────┘
           ↓
(     Assembly     )
```
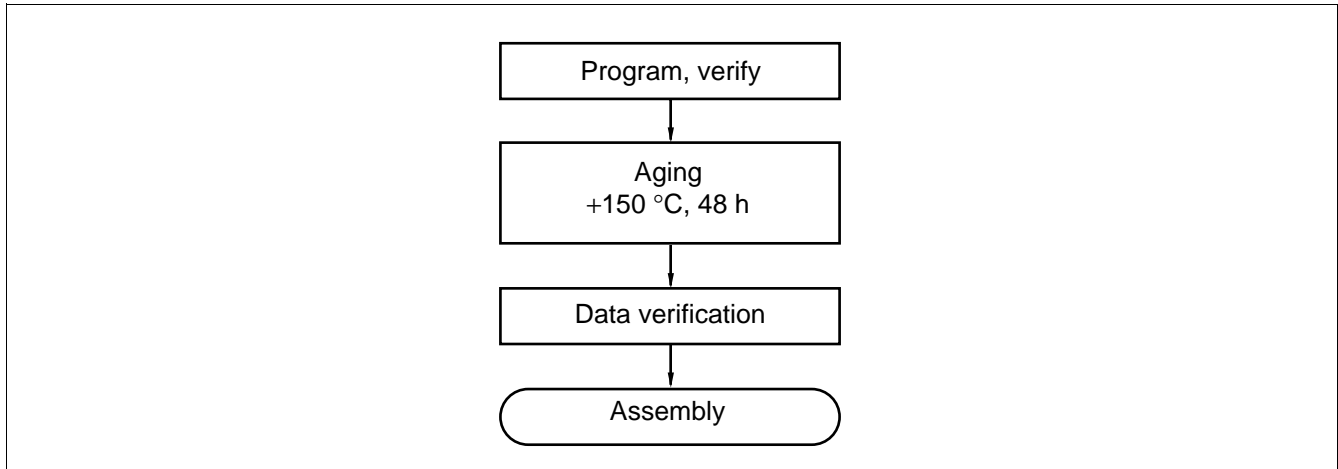

• **Programming Yield**

All bits cannot be programmed at Fujitsu shipping test to a blanked OTPROM microcomputer, due to its nature. For this reason, a programming yield of 100% cannot be assured at all times.

• **EPROM Programmer Socket Adapter**

Package	Compatible socket adapter
FPT-64P-M06	ROM-64QF-28DP-8L

Inquiry: Sun Hayato Co., Ltd.: TEL 81-3-3802-5760

Note: Connect the jumper pin to V_{SS} when using.
   Depending on the EPROM programmer, inserting a capacitor of approx. 0.1 µF between V_{PP} and V_{SS} or V_{CC} and V_{SS} can stabilize programming operations.

Note: • Each bit is set to '1' as the initialized value.
 • Do not write '0' to the vacant bit.

MB89810A Series

■ BLOCK DIAGRAM
■ CPU CORE

1. Memory Space

The microcontrollers of the MB89810A series offer a memory space of 64 Kbytes for storing all of I/O, data, and program areas. The I/O area is located at the lowest address. The data area is provided immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is located at exactly the opposite end, that is, near the highest address. Provide the tables of interrupt reset vectors and vector call instructions toward the highest address within the program area. The memory space of the MB89810A series is structured as illustrated below.
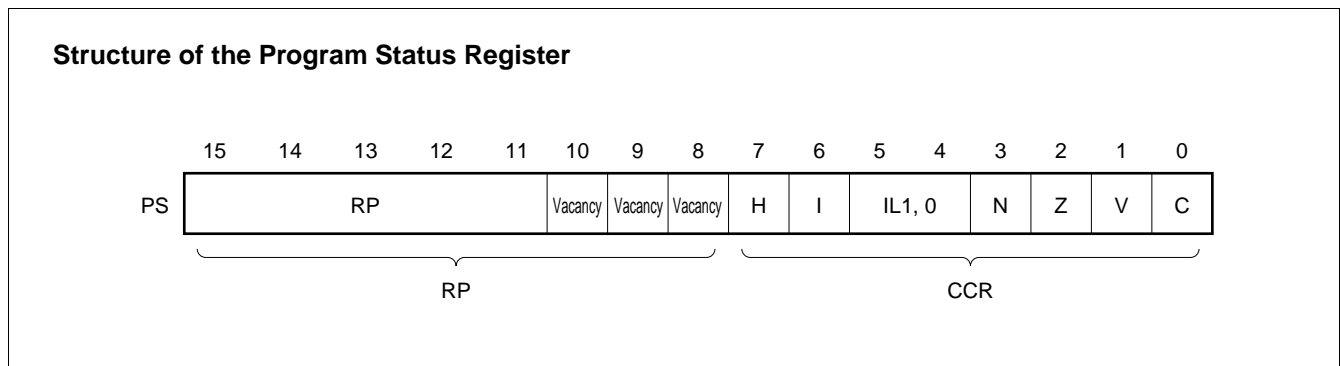

Memory Space
2. Registers

The F^{2}MC-8L family has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The following dedicated registers are provided:

Program counter (PC):	A 16-bit register for indicating instruction storage positions
Accumulator (A):	A 16-bit temporary register for storing arithmetic operations, etc. When the instruction is an 8-bit data processing instruction, the lower byte is used.
Temporary accumulator (T):	A 16-bit register which performs arithmetic operations with the accumulator When the instruction is an 8-bit data processing instruction, the lower byte is used.
Index register (IX):	A 16-bit register for index modification
Extra pointer (EP):	A 16-bit pointer for indicating a memory address
Stack pointer (SP):	A 16-bit register for indicating a stack area
Program status (PS):	A 16-bit register for storing a register pointer, a condition code

```
            16 bits                                              Initial value
        ┌──────────────┐
        │      PC      │    : Program counter              FFFD_H
        ├──────────────┤
        │      A       │    : Accumulator                  Undefined
        ├──────────────┤
        │      T       │    : Temporary accumulator        Undefined
        ├──────────────┤
        │      IX      │    : Index register               Undefined
        ├──────────────┤
        │      EP      │    : Extra pointer                Undefined
        ├──────────────┤
        │      SP      │    : Stack pointer                Undefined
        ├──────────────┤
        │      PS      │    : Program status        I-flag = 0, IL1, 0 = 11
        └──────────────┘                            Other bits are undefined.
```

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR). (See the diagram below.)

Structure of the Program Status Register

	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
PS			RP			Vacancy	Vacancy	Vacancy	H	I	IL1, 0		N	Z	V	C

RP (bits 15–11) CCR (bits 7–0)

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

Rule for Conversion of Actual Addresses of the General-purpose Register Area

	RP	Lower OP codes
"0" "0" "0" "0" "0" "0" "0" "1"	R4 R3 R2 R1 R0	b2 b1 b0
↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓	↓ ↓ ↓ ↓	
Generated addresses A15 A14 A13 A12 A11 A10 A9 A8 A7 A6 A5 A4 A3 A2 A1 A0		

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data and bits for control of CPU operations at the time of an interrupt.

H-flag:Set when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared otherwise. This flag is for decimal adjustment instructions.

I-flag:Interrupt is allowed when this flag is set to 1. Interrupt is prohibited when the flag is set to 0. Set to 0 when reset.

IL1, 0:Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

IL1	IL0	Interrupt level	High-low
0	0	1	High
0	1		
1	0	2	
1	1	3	Low = no interrupt

N-flag:Set if the MSB is set to 1 as the result of an arithmetic operation. Cleared when the bit is set to 0.

Z-flag:Set when an arithmetic operation results in 0. Cleared otherwise.

V-flag:Set if the complement on 2 overflows as a result of an arithmetic operation. Reset if the overflow does not occur.

C-flag:Set when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared otherwise. Set to the shift-out value in the case of a shift instruction.

The following general-purpose registers are provided:

General-purpose registers: An 8-bit register for storing data

The general-purpose registers are 8 bits and located in the register banks of the memory. One bank contains eight registers and up to a total of 32 banks can be used on the MB89816A. The bank currently in use is indicated by the register bank pointer (RP).

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

(V_{SS} = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V_{CC}	V_{SS} – 0.3	V_{SS} + 7.0	V	
Input voltage	V_{I1}	V_{SS} – 0.3	V_{CC} + 0.3	V	Except P50 to P54
	V_{I2}	V_{SS} – 0.3	V_{SS} + 7.0	V	P50 to P54
Output voltage	V_{O1}	V_{SS} – 0.3	V_{CC} + 0.3	V	Except P50 to P54
	V_{O2}	V_{SS} – 0.3	V_{SS} + 7.0	V	P50 to P54
"L" level maximum output current	I_{OL}	—	20	mA	Peak value
"L" level average output current	I_{OLAV1}	—	4	mA	Average value except pins other than P50 to P54
	I_{OLAV2}	—	10	mA	Average value for P50 to P54
"L" level total maximum output current	$\sum I_{OL}$	—	100	mA	Peak value
"L" level total average output current	$\sum I_{OLAV}$	—	40	mA	Average value
"H" level maximum output current	I_{OH}	—	–20	mA	Peak value
"H" level average output current	I_{OHAV}	—	–4	mA	Average value
"H" level total maximum output current	$\sum I_{OH}$	—	–50	mA	Peak value
"H" level total average output current	$\sum I_{OHAV}$	—	–20	mA	Average value
Power consumption	P_D	—	300	mW	
Operating temperature	T_A	–40	+85	°C	
Storage temperature	Tstg	–55	+150	°C	

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended Operating Conditions

(V_{SS} = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V_{CC}	2.2*	6.0	V	Normal operation assurance range MB89816A
		2.7*	6.0	V	Normal operation assurance range MB89P817A
		1.5	6.0	V	Retains the RAM state in stop mode
Open-drain output pin application voltage	V_D	V_{SS} – 0.3	V_{SS} + 6.0	V	P50 to P54 (without pull-up resistor)
Operating temperature	T_A	–40	+85	°C	

*: These values vary with the operating frequency. See Figure 1.
Figure 1   Operating Voltage vs. Main Clock Operating Frequency (for MB89816A)

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

3. DC Characteristics

$(V_{CC} = +5.0 \text{ V}, V_{SS} = 0.0 \text{ V}, T_A = -40 \text{ °C to } +85 \text{ °C})$

Parameter	Sym-bol	Pin	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
"H" level input voltage	V_{IH}	P00 to P07, P10 to P17, P30 to P37, P40 to P47, P50 to P54 (with pull-up resistor)	—	$0.7 V_{CC}$	—	$V_{CC} + 0.3$	V	
	V_{IHS}	$\overline{RST}$, MOD0, MOD1, P60 to P67, Peripheral input for port 3 and port 4	—	$0.8 V_{CC}$	—	$V_{CC} + 0.3$	V	
	V_{IHS2}	P50 to P54 (without pull-up resistor)	—	$0.8 V_{CC}$	—	$V_{SS} + 6.0$	V	
"L" level input voltage	V_{IL}	P00 to P07, P10 to P17, P30 to P37, P40 to P47, P50 to P54	—	$V_{SS} - 0.3$	—	$0.3 V_{CC}$	V	
	V_{ILS}	$\overline{RST}$, MOD0, MOD1, P60 to P67, Peripheral input for port 3 and port4	—	$V_{SS} - 0.3$	—	$0.2 V_{CC}$	V	
"H" level output voltage	V_{OH}	P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47	$I_{OH} = -2.0 \text{ mA}$	2.4	—	—	V	
"L" level output voltage	V_{OL1}	P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P54 P60 to P67	$I_{OL} = 1.8 \text{ mA}$	—	—	0.4	V	
	V_{OL2}	P50 to P54	$I_{OL} = 6 \text{ mA}$ $V_{CC} = 3 \text{ V}$	—	—	0.5	V	
	V_{OL3}	$\overline{RST}$	$I_{OL} = 4.0 \text{ mA}$	—	—	0.4	V	
Input leakage current (Hi-z output leakage current)	I_{LI1}	P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P54, P60 to P67, MOD0, MOD1	$0.45 \text{ V} < V_I < V_{CC}$	—	—	± 5	μA	Without pull-up resistor
Pull-up resistance	R_{PULL}	P00 to P07, P10 to P17, P30 to P37, P40 to P47, P50 to P54, P60 to P67, $\overline{RST}$	$V_I = 0.0 \text{ V}$	25	50	100	$k\Omega$	With pull-up resistor

Input capacitance	C_{IN}	Other than V_{CC} and V_{SS}	$f = 1\ MHz$	—	10	—	pF	

*: The measurement conditions of power supply current are as follows: the external clock and $T_A = +25\ °C$.

4. AC Characteristics

(1) Reset Timing

$(V_{CC} = +5.0 \text{ V} \pm 10\%, AV_{SS} = V_{SS} = 0.0 \text{ V}, T_A = -40 \text{ °C to } +85 \text{ °C})$

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min.	Max.		
$\overline{\text{RST}}$ "L" pulse width	t_{ZLZH}	—	$48\ t_{CH}$	—	ns	

Note: t_{CH} is the cycle time of the main clock.
(2) Power-on Reset

$(AV_{SS} = V_{SS} = 0.0 \text{ V}, T_A = -40 \text{ °C to } +85 \text{ °C})$

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min.	Max.		
Power supply rising time	t_R	—	—	50	ms	Power-on reset function only
Power supply cut-off time	t_{OFF}		1	—	ms	Due to repeated operations

Note: Make sure that power supply rises within the selected oscillation stabilization time.
If power supply voltage needs to be varied in the course of operation, a smooth voltage rise is recommended.

Note that a sudden increase in supply voltage may result in a power-on reset.
When increasing the supply voltage during operation, voltage variation should be within twice the intended increment so that the voltage rises as smoothly as possible.
(3) Clock Timing

(AV$_{SS}$ = V$_{SS}$ = 0.0 V, T$_A$ = –40 °C to +85 °C)

Parameter	Symbol	Pin	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Clock frequency	F$_{CH}$	X0, X1	—	1	—	5	MHz	
	F$_{CL}$	X0A, X1A		—	32.768	—	kHz	
Clock cycle time	t$_{CH}$	X0, X1		200	—	1000	ns	
	t$_{CL}$	X0A, X1A		—	30.5	—	µs	
Input clock pulse width	P$_{WH}$ P$_{WL}$	X0		20	—	—	ns	External clock
	P$_{WHL}$ P$_{WLL}$	X0A		—	15.2	—	µs	
Input clock rising/ falling time	t$_{CR}$ t$_{CF}$	X0		—	—	10	ns	External clock

X0 and X1 Timing and Conditions
Main Clock Conditions

When a crystal or ceramic resonator is used
when an external clock is used
When a CR oscillator is used
X0A and X1A Timings and Conditions

Subclock Conditions

When a crystal or ceramic resonator is used

when an external clock is used
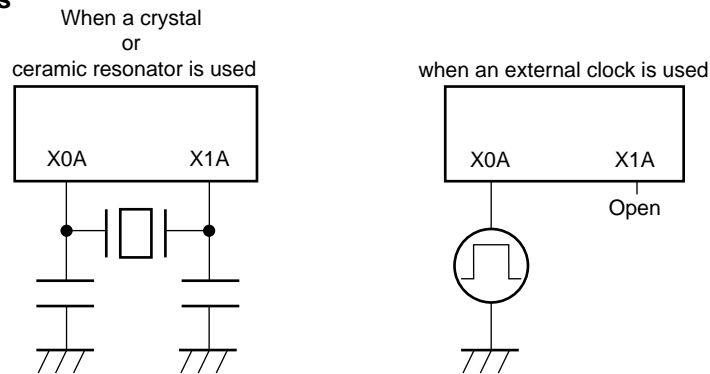

(4) Instruction Cycle

Parameter	Symbol	Value (typ)	Unit	Remarks
Instruction cycle (Minimum execution time)	t_{inst}	$4/F_C$, $8/F_C$, $16/F_C$, $64/F_C$	μs	$t_{inst} = 0.8$ μs when operating at $F_C = 5$ MHz ($4/F_C$)
		$2/F_{CL}$	μs	$t_{inst} = 61.036$ μs when operating at $F_{CL} = 32.768$ kHz

Note: When operating at 5 MHz, the cycle varies with the set execution time.

(5) Serial I/O Timings

$(V_{CC} = +5.0$ V± 10 %, $AV_{SS} = V_{SS} = 0.0$ V, $T_A = -40$ °C to +85 °C)

Parameter	Symbol	Pin	Condition	Value Min.	Value Max.	Unit	Remarks
Serial clock cycle time	t_{SCYC1}	$\overline{SCK}$	Internal shift clock mode	$2\ t_{inst}$	—	ns	
$\overline{SCK} \downarrow \rightarrow$ SO time	t_{SLOV1}	$\overline{SCK}$, SO		−200	200	ns	
Valid SI $\rightarrow \overline{SCK} \uparrow$	t_{IVSH1}	SI, $\overline{SCK}$		$1/2\ t_{inst}$	—	ns	
$\overline{SCK} \uparrow \rightarrow$ valid SI hold time	t_{SHIX1}	$\overline{SCK}$, SI		$1/2\ t_{inst}$	—	ns	
Serial clock "H" pulse width	t_{SHSL}	$\overline{SCK}$	External shift clock mode	$1\ t_{inst}$	—	ns	
Serial clock "L" pulse width	t_{SLSH}			$1\ t_{inst}$	—	ns	
SCK $\downarrow \rightarrow$ SO time	t_{SLOV2}	$\overline{SCK}$, SO		0	200	ns	
Valid SI $\rightarrow \overline{SCK} \uparrow$	t_{IVSH2}	SI, $\overline{SCK}$		$1/2\ t_{inst}$	—	ns	
$\overline{SCK} \uparrow \rightarrow$ valid SI hold time	t_{SHIX2}	$\overline{SCK}$, SI		$1/2\ t_{inst}$	—	ns	

Note: For information on t_{inst}, see " (4) Instruction Cycle".

(6) UART Timings

$(V_{CC} = +5.0\ V\pm10\ \%,\ AV_{SS} = V_{SS} = 0.0\ V,\ T_A = -40\ ^\circ C\ to\ +85\ ^\circ C)$

Parameter	Symbol	Pin	Condition	Value Min.	Value Max.	Unit	Remarks
Serial clock cycle time	t_{SCYC}	SCL1, SCL2	Internal shift clock mode	$2\ t_{inst}$	—	ns	
SCL $\downarrow \to$ TXDx time	t_{SLOV1}	SCLx, TXDx		-200	200	ns	
Valid RXDx $\to$ SCLx $\uparrow$	t_{IVSH1}	RXDx, SCLx		$1/2\ t_{inst}$	—	ns	
SCLx $\uparrow \to$ valid RXDx hold time	t_{SHIX1}	SCL1, RXD2		$1/2\ t_{inst}$	—	ns	
Serial clock "H" pulse width	t_{SHSL}	SCL1, SCL2	External shift clock mode	$1\ t_{inst}$	—	ns	
Serial clock "L" pulse width	t_{SLSH}			$1\ t_{inst}$	—	ns	
SCLx $\downarrow \to$ TXDx time	t_{SLOV2}	SCLx, TXDx		0	200	ns	
Valid RXDx $\to$ SCLx $\uparrow$	t_{IVSH2}	RXDx, SCLx		$1/2\ t_{inst}$	—	ns	
SCLx $\uparrow \to$ valid RXDx hold time	t_{SHIX2}	SCL1, RXD2		$1/2\ t_{inst}$	—	ns	

Notes: • For information on t_{inst}, see " (4) Instruction Cycle".
   • The edge polarity for the SLCx input is assumed when LSEL bit = 0 for SMC2. The polarity is inverted when LSEL = 1.
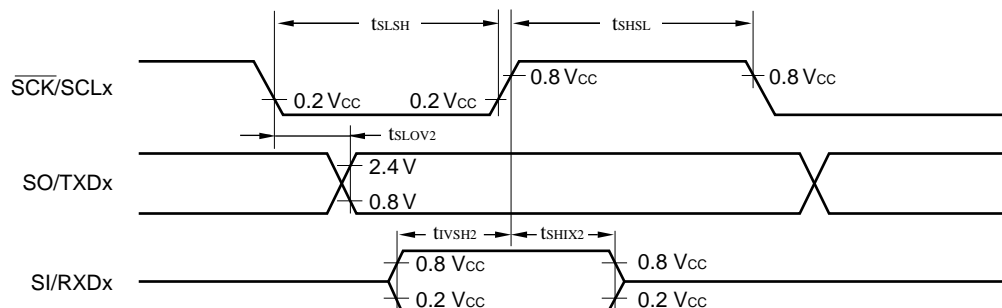

(7) Peripheral Input Timings

$(V_{CC} = +5.0 \text{ V} \pm 10 \text{ \%}, AV_{SS} = V_{SS} = 0.0 \text{ V}, T_A = -40 \text{ °C to } +85 \text{ °C})$

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min.	Max.		
Peripheral input "H" pulse width	t_{ILIH}	EC, INT0 to INT7	—	$2 t_{inst}$	—	ns	
Peripheral input "L" pulse width	t_{IHIL}	EC, INT0 to INT7	—	$2 t_{inst}$	—	ns	
"H" input pulse width of pulse width detection enable signal	t_{PWEH}	PWE	—	$512 t_{CL} + 200$ or $480 t_{CL} + 200$	—	ns	
"L" input pulse width of pulse width detection enable signal	t_{PWEL}		—	$512 t_{CL} + 200$ or $480 t_{CL} + 200$	—	ns	

Notes:
- For information on t_{inst}, see " (4) Instruction Cycle".
- t_{CL} represents the subclock cycle time.
- The PWE pulse width value varies with the first divider selection bit of the watch prescaler. The pulse width is "$512 t_{CL} + 200$" when divide by 16 is selected; or "$480 t_{CL} + 200$" when divide by 15 is selected.
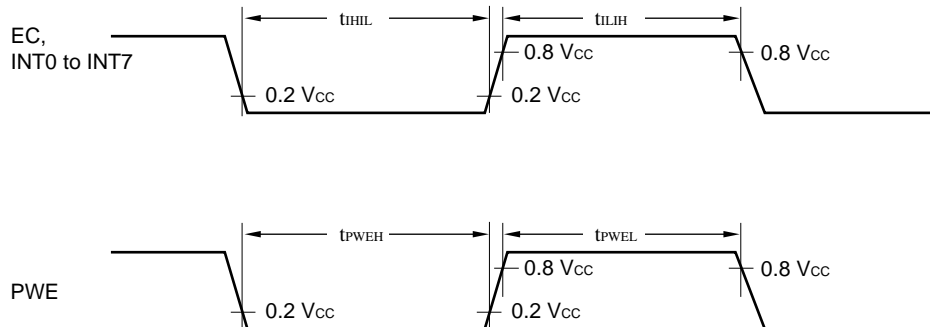

■ MASK OPTIONS

No.	Part number	MB89816A	MB89P817A
	Specifying procedure	Specify when ordering masking	Set with EPROM programmer
1	Pull-up resistors •P00 to P07, P10 to P17, •P30 to P37, P40 to P47, •P50 to P54, P60 to P67	Specify by pin	Can be set per pin. (P50 to P54 are available only for without a pull-up resistor.)
2	Power-on reset selection •With power-on reset •Without power-on reset	Selectable	Setting possible
3	Main clock oscillation (5 MHz) stabilization time selection* •approx. $2^{18}/F_{CH}$ (approx. 52.4 ms) •approx. $2^{17}/F_{CH}$ (approx. 26.2 ms) •approx. $2^{14}/F_{CH}$ (approx. 3.2 ms) •approx. $2^4/F_{CH}$ (approx. 0 ms)	Selectable	Setting possible
4	Reset pin output selection •With reset output •Without reset output	Selectable	Setting possible
5	Selection either single- or dual-clock system •Single clock •Dual clock	Selectable	Setting possible
6	Main clock oscillator type selection •Crystal or ceramic oscillator •CR	Selectable	Setting possible

F_{CH}: Main clock frequency

*: The main clock oscillation setting time is generated by dividing the main clock frequency. Note that the oscillation cycle is not stable immediately after oscillation is started. The settling time value in this data sheet should be used as a reference.
