- Output Compatible With TTL, MOS, and CMOS

## description

These devices consist of two independent voltage comparators that are designed to operate from a single power supply over a wide range of voltages. Operation from dual supplies also is possible as long as the difference between the two supplies is 2 V to 36 V and  $V_{CC}$  is at least 1.5 V more positive than the input common-mode voltage. Current drain is independent of the supply voltage. The outputs can be connected to other open-collector outputs to achieve wired-AND relationships.

The LM193 is characterized for operation from  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The LM293 and LM293A are characterized for operation from  $-25^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ . The LM393 and LM393A are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ . The LM2903 and LM2903Q are characterized for operation from  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  and is manufactured to demanding automotive requirements.

<sup>†</sup> The D package is available taped and reeled. Add the suffix R (e.g., LM393DR).

<sup>‡</sup> The PW package is only available left-end taped and reeled.

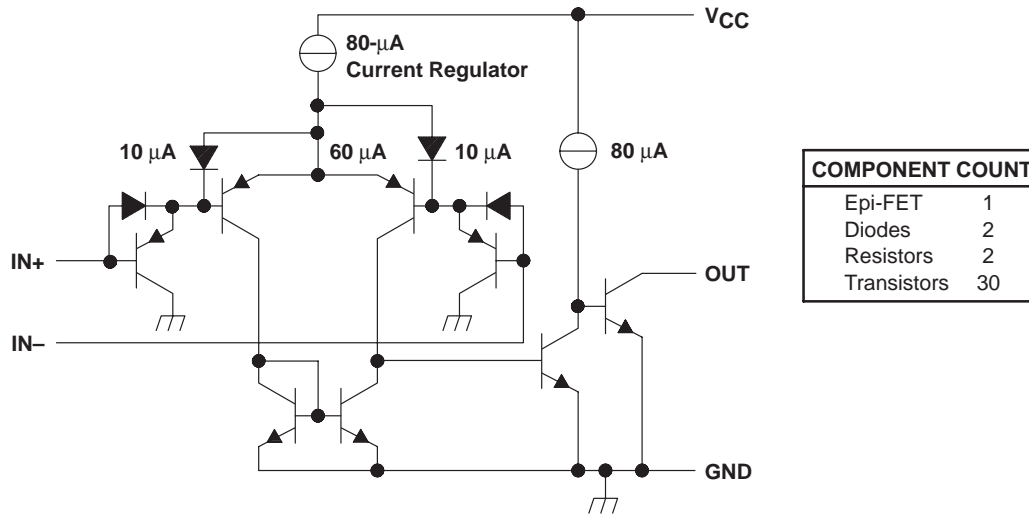

<sup>§</sup> Chips are tested at 25°C (see LM393Y for electrical characteristics).

**LM393Y chip information**

This chip, when properly assembled, displays characteristics similar to the LM393. Thermal compression or ultrasonic bonding can be used on the doped-aluminum bonding pads. Chips can be mounted with conductive epoxy or a gold-silicon preform.

**schematic (each comparator)**

Current values shown are nominal.

**absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†**

Supply voltage, $V_{CC}$ (see Note 1)	36 V
Differential input voltage, $V_{ID}$ (see Note 2)	$\pm 36$ V
Input voltage range, $V_I$ (either input)	–0.3 V to 36 V
Output voltage, $V_O$	36 V
Output current, $I_O$	20 mA
Duration of output short-circuit to ground (see Note 3)	unlimited
Continuous total power dissipation	See Dissipation Rating Table
Operating free-air temperature range, $T_A$ : LM193	–55°C to 125°C
LM293, LM293A	–25°C to 85°C
LM393, LM393A	0°C to 70°C
LM2903, LM2903Q	–40°C to 125°C
Storage temperature range, $T_{stg}$	–65°C to 150°C
Case temperature for 60 seconds: FK package	260°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds: D, P, or PW package	260°C
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds: JG package	300°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. All voltage values, except differential voltages, are with respect to the network ground.  
2. Differential voltages are at IN+ with respect to IN–.  
3. Short circuits from outputs to  $V_{CC}$  can cause excessive heating and eventual destruction.
