

# SN55ALS161, SN75ALS161 OCTAL GENERAL-PURPOSE INTERFACE BUS TRANSCEIVERS

SLLS019D – JUNE 1986 – REVISED MAY 1995

## SUITABLE FOR IEEE STANDARD 488-1978 (GPIB)<sup>†</sup>

- 8-Channel Bidirectional Transceiver
- Designed to Implement Control Bus Interface
- Designed for Single Controller
- High-Speed Advanced Low-Power Schottky Circuitry
- Low Power Dissipation:  
SN55ALS161 . . . 59 mW Max Per Channel  
SN75ALS161 . . . 46 mW Max Per Channel
- Fast Propagation Times:  
SN55ALS161 . . . 25 ns Max  
SN75ALS161 . . . 20 ns Max
- High-Impedance pnp Inputs
- Receiver Hysteresis:  
SN55ALS161 . . . 550 mV Typ  
SN75ALS161 . . . 650 mV Typ
- Bus-Terminating Resistors Provided on Driver Outputs
- No Loading of Bus When Device Is Powered Down ( $V_{CC} = 0$ )
- Power-Up/Power-Down Protection (Glitch Free)

### description

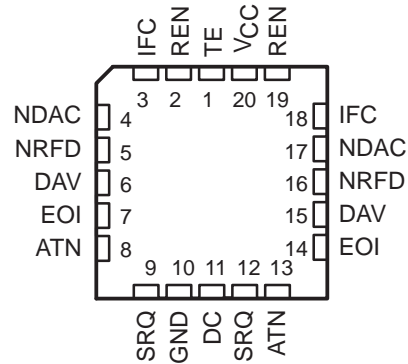

The SN55ALS161 and SN75ALS161 eight-channel general-purpose interface bus transceivers are monolithic, high-speed, advanced low-power Schottky process devices designed to provide the bus-management and data-transfer signals between operating units of a single controller instrumentation system. When combined with the SN55ALS160 and SN75ALS160 octal bus transceivers, the 'ALS161 provides the complete 16-wire interface for the IEEE 488 bus.

The SN55ALS161 and SN75ALS161 feature eight driver-receiver pairs connected in a front-to-back configuration to form input/output (I/O) ports at both the bus and terminal sides. The direction of data through these driver-receiver pairs is determined by the DC and TE enable signals.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

<sup>†</sup> The transceivers are suitable for IEEE Standard 488 applications to the extent of the operating conditions and characteristics specified in this data sheet. Certain limits contained in the IEEE specification are not met or cannot be tested over the entire military temperature range.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

# SN55ALS161, SN75ALS161 OCTAL GENERAL-PURPOSE INTERFACE BUS TRANSCEIVERS

SLLS019D – JUNE 1986 – REVISED MAY 1995

## description (continued)

The driver outputs general-purpose interface bus (GPIB I/O ports) feature active bus-terminating resistor circuits designed to provide a high impedance to the bus when  $V_{CC} = 0$ . The drivers are designed to handle loads up to 48 mA of sink current. Each receiver features pnp transistor inputs for high input impedance and hysteresis of 400 mV on the commercial part, 250 mV on the military part minimum for increased noise immunity. All receivers have 3-state outputs to present a high impedance to the terminal when disabled.

The SN55ALS161 is characterized for operation from  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN75ALS161 is characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .

**FUNCTION TABLE  
RECEIVE/TRANSMIT**

| CONTROLS |    |      | BUS-MANAGEMENT CHANNELS |     |     |     | DATA-TRANSFER CHANNELS |                    |      |      |
|----------|----|------|-------------------------|-----|-----|-----|------------------------|--------------------|------|------|
| DC       | TE | ATN† | ATN†                    | SRQ | REN | IFC | EOI                    | DAV                | NDAC | NRFD |
|          |    |      | (controlled by DC)      |     |     |     |                        | (controlled by TE) |      |      |
| H        | H  | H    | R                       | T   | R   | R   | T                      | T                  | R    | R    |
| H        | H  | L    |                         |     |     |     | R                      |                    |      |      |
| L        | L  | H    | T                       | R   | T   | T   | R                      | R                  | T    | T    |
| L        | L  | L    |                         |     |     |     | T                      |                    |      |      |
| H        | L  | X    | R                       | T   | R   | R   | R                      | R                  | T    | T    |
| L        | H  | X    | T                       | R   | T   | T   | T                      | T                  | R    | R    |

H = high level, L = low level, R = receive, T = transmit, X = irrelevant

Direction of data transmission is from the terminal side to the bus side, and the direction of data receiving is from the bus side to the terminal side. Data transfer is noninverting in both directions.

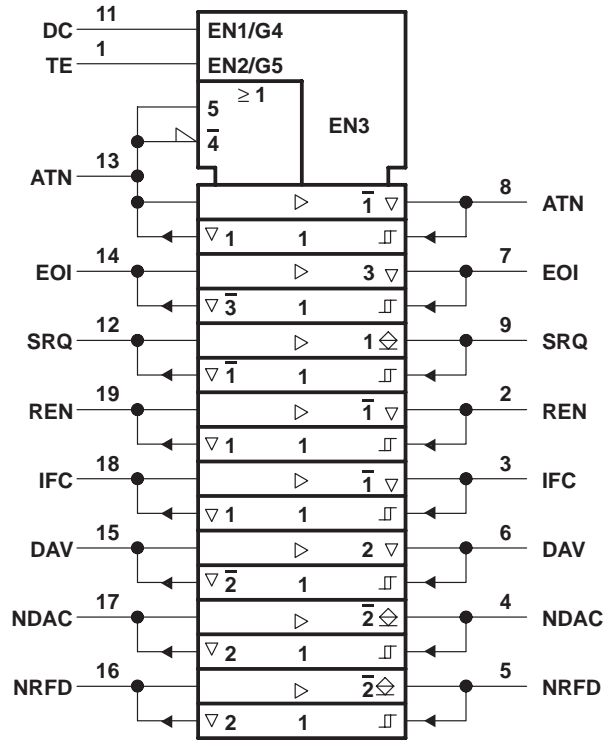

† ATN is a normal transceiver channel that functions additionally as an internal direction control or talk enable for EOI whenever the DC and TE inputs are in the same state. When DC and TE are in opposite states, the ATN channel functions as an independent transceiver only.

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

|   |                              |
|---|------------------------------|
| Supply voltage, $V_{CC}$ (see Note 1) .....   | 7 V                          |
| Input voltage, $V_I$ .....  | 5.5 V                        |
| Low-level driver output current, $I_{OL}$ .....   | 100 mA                       |
| Continuous total dissipation .....  | See Dissipation Rating Table |
| Operating free-air temperature range, $T_A$ : SN55ALS161 .....                          | –55°C to 125°C               |
| SN75ALS161 .....  | 0°C to 70°C                  |
| Storage temperature range, $T_{stg}$ .....  | –65°C to 150°C               |
| Case temperature for 60 seconds: FK package, $T_C$ .....                                | 260°C                        |
| Lead temperature 1,6 mm (1/16 inch) from the case for 60 seconds: J or W package .....  | 300°C                        |
| Lead temperature 1,6 mm (1/16 inch) from the case for 10 seconds: DW or N package ..... | 260°C                        |

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to network ground terminal.

[ ] denotes the SN55ALS161 military test conditions.

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

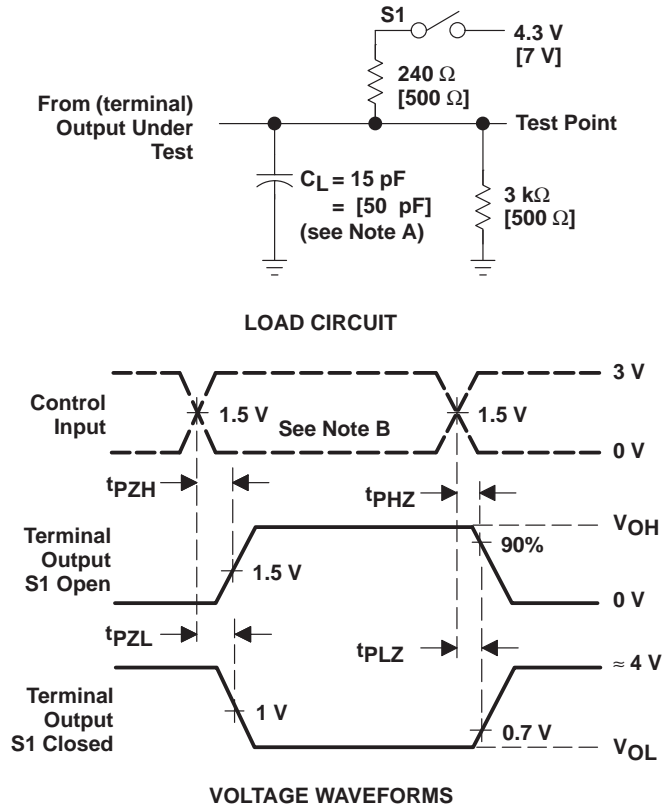

B. The input pulse is supplied by a generator having the following characteristics: PRR ≤ 1 MHz, 50% duty cycle, t<sub>r</sub> ≤ 6 ns, t<sub>f</sub> ≤ 6 ns, Z<sub>O</sub> = 50 Ω.

## IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
