

# DESIGNER'S NOTEBOOK

## Speech data for Spanish LPC Day-Time-Stamping (DTS) on TMS320Cxx

*Contributed by Gerardo Murillo*

### ***Design Problem***

Where can I get Spanish speech data allowing generation of a vocal output for Date and Time Stamping (DTS) and voice prompts ?

### ***Design Solution***

Many applications with voice output use a predefined speech vocabulary that can be stored in ROM memory. In order to reduce the space in ROM, this vocabulary is recorded off line and LPC processed. The compressed speech data obtained this way can then be stored in internal or external program space (ROM). Then, by means of an LPC decoding algorithm, this speech data can be played online by the final application

Given the redundancy on the type of phrases played in these applications, the speech data is not recorded as phrases, but as isolated words. Phrases are built by concatenating words (playing one word after the other) These feature allows for a significant amount of memory space economy. More over, since these vocabularies contain numbers and since there is also much repetition of "sub-word" units between different numbers, it is possible to reproduce the complete number set by using only a small number of "sub-word" units pasted together to build the complete numbers.

The information the designer needs is :

The compressed speech data in assembler language format.

The catalog of the available words

Lists showing how to make phrases

The present DNP provides the user with a ready to use vocabulary coded in LPC (format D6), the list of available words and "phrase tables" indicating the units needed to build a word or a phrase.

Please refer to the TSP50C1x design manual (Litterature part SPSS011B) for information on the LPC encoding/decoding format. Please refer to this same reference for information on the LPC-D6 synthesis algorithm.

---

## VOCABULARY

with summary on word length and size :

Sample Frequency: 8000 Hz ;

Frame Duration: 25.00 ms
